RTTS
The Software Quality Experts

RTTS' O3 Onshore Testing Service Combines
Increased Productivity with Recession-Friendly Pricing

New York, February 11, 2009 – Technology professionals are facing increased pressure to improve software quality while containing or reducing costs. Offshore outsourcing is often relied on in such situations, but RTTS (www.rtts.com), specialists in providing software quality for critical business applications, has a better solution.

RTTS' O3 (Onshore Off-Site Outsourcing) program, which was launched in 2003, utilizes the company's American test engineers for work on client projects from the company's multiple U.S. offices. RTTS' expert engineers provide exceptional quality at competitive prices – without the risks commonly associated with offshore outsourcing, such as inferior infrastructure, reduced quality, and cultural, language and time zone issues.

This competitively-priced alternative to offshore outsourcing provides a tremendous savings – real ROI – due to much greater productivity per dollar than offshoring. And the service delivers the high quality that RTTS has been known for since 1996.

"The O3 program allows companies to utilize RTTS' test engineers in our offices across the United States without sacrificing the level of quality that we have always delivered," stated Bill Hayduk, president and director of professional services for RTTS. "O3 empowers companies to take advantage of the cost-efficiency found in outsourcing while avoiding the hazards common in the offshore model. This model results in significantly more productivity per hour than offshoring and thus higher ROI."

RTTS provides the following tactical services: software process assessments, test methodology and management guidance and test planning assistance. Testing services include: automated functional/regression, performance/load, application security and manual regression testing.

For more information on the O3 program and other services offered by RTTS, visit www.rtts.com/services/outsourcing/onshore.
