## Selenium Added to RTTS Course Offerings

**New York, November 15, 2009** – RTTS ([www.rtts.com](http://www.rtts.com)), a leader in providing software quality for critical business applications, announced today its intention add open-source web application testing tool Selenium to its course offerings.

The emergence of cloud applications, SaaS and advanced web applications demand a testing tool that is accessible to smaller development groups and large teams looking to avoid the huge costs of implementing enterprise software. Selenium is one of those tools and has been gaining traction on becoming a web application testing standard among the software community. While there are some tutorials and videos available on the tool, RTTS fulfills the community's need for formal cost-effective instructor led training.

RTTS' one-day Introduction to Selenium course includes an in-depth look at Selenium IDE and Selenium Remote Control. Expert trainers with practical real-world experiences will teach students on:

- Getting started with Selenium
- Record and playback process
- Understanding generated code created during recording
- Using XPath with Selenium
- Installation and configuration of Selenium with Eclipse
- Using Selenium Remote Control
- Frequently used Selenium commands
- Handling environments not supported by Selenium
- Creation of Custom Logs

Classes will take place at RTTS' training facilities in mid-town New York City, a few blocks from Grand Central train station. Classrooms are fully equipped with the latest state-of-the-art equipment.

For those not in the New York metro area, this course is also delivered live online. Additionally, RTTS provides private, on-site training for organizations that prefer in-person training.

For more information on these and other training courses offered by RTTS, please visit [www.rttsweb.com/training](http://www.rttsweb.com/training).

**About Selenium:** Selenium ([www.seleniumhq.org](http://www.seleniumhq.org)) is a suite of tools specifically for testing web applications. Selenium IDE is a Firefox add-on that makes it easy to record and playback tests and is a complete integrated development environment for Selenium tests. Selenium Remote Control (RC) is a test tool with a client/server system that allows you to control web browsers locally or on other computers, using almost any programming language and testing framework.

**About RTTS:** RTTS ([www.rtt.com](http://www.rtt.com)) is the premier professional services organization that specializes in providing software quality for critical business applications. With offices in New York, Atlanta, Philadelphia and Phoenix, RTTS has been serving Fortune 500 and mid-sized companies since 1996.

RTTS draws on its expertise utilizing best-of breed products, expert engineers and a proven methodology to provide the foremost end-to-end solution that ensures application functionality, reliability, scalability and security. For more information, visit [www.rtt.com](http://www.rtt.com).
