New York-Based RTTS Hits Back at Offshore Outsourcing

RTTS' Onshore Testing Programs Provide Maximum ROI, Prevent Ills of Offshore Outsourcing

New York, February 25, 2009 – RTTS (<http://www.rtts.com>), the premier provider of software quality for critical business applications, announced today that the company is taking a stand against offshore outsourcing by providing IT organizations with onshore alternatives. While offshore outsourcing is a popular solution for cutting costs, a recent *CIO* article stated that upwards of 53 percent of customers have not realized business value/return on investment from the practice. RTTS' onshore testing services can help clients achieve significant productivity while avoiding the potential issues common in offshore outsourcing.

"Since 1996, RTTS has had extensive experience in providing software quality for Fortune 500 firms and mid-sized businesses. As a result, we have worked with clients utilizing offshore outsourcing and we have seen many instances of the problems they experience firsthand," stated Bill Hayduk, president of RTTS.

"Keeping these negative outcomes and the current economic situation in mind, we are committed to ensuring that software quality is within the reach of organizations everywhere," Hayduk continued. "As a result, RTTS has two programs, TestPack and O³, based on the concept of increasing the productivity per dollar spent on testing. These programs utilize the expertise of our American employees and are an ideal way to achieve a higher ROI for outsourced testing."

TestPack - Bankable Testing Hours at a Predictable Cost

With RTTS' TestPack, clients can take advantage of a predictable-cost model for utilizing RTTS' test engineers. In this model, clients prepay for bankable-hour packs, which have one blended rate for RTTS experts and can be utilized on an as-needed basis for test projects. Whenever testing needs arise, RTTS performs performance, load, automated functional, security, manual or other types of tests when the client needs them performed. The benefit is a predictable pricing model for long-term testing needs, the ability to expand and contract staff as needs change, without changing budgeted costs, and of course, better quality software.

O³ - Onshore Off-Site Outsourced Testing

RTTS' O³ program leverages RTTS' test engineers for work on client projects from the company's multiple U.S. offices. Like TestPack, clients can use O³ for automated regression testing, manual testing, performance or load testing or application security testing.

These alternatives to offshore outsourcing provide greater productivity per dollar than offshoring, resulting in maximum ROI and cost savings. And both services allow clients to take advantage of the quality that RTTS has been known for since 1996. For more information on these and other services offered by RTTS, visit www.rtts.com/services/outsourcing.
