RTTS to Feature Data Warehouse Test Automation Tool, QuerySurge, at Teradata PARTNERS User Group Conference 2012

New York, NY – October 21, 2012 –RTTS (www.rtts.com), a leading provider of quality assurance software and services for data warehouse projects, will be exhibiting at the Teradata PARTNERS User Group Conference from October 22 – 24 at the Gaylord National Hotel and Convention Center just outside of Washington, D.C. The company will highlight its enterprise data warehouse testing tool, QuerySurge ™, which was built to automate data validation testing throughout the ETL process.

RTTS experts will be available at Booth #521 in the Exhibit Hall to introduce Teradata business and technology users to QuerySurge, and discuss how it can increase data validation by as much as fifty-fold while dramatically reducing their testing efforts.

RTTS' team of test experts developed QuerySurge to address the unique quality assurance and testing requirements of any data warehousing project. The tool gives users the ability to test 100% of their data, and detect almost any type of data defect before it hits their company's production environment. QuerySurge was built to validate each piece of data, persisting complete data sets from both Source and Target data sources. This exposes data failures and differences, providing users with the ability to capture and pinpoint defects throughout the ETL development cycle.

Using QuerySurge has helped organizations increase quality and reduce the chance of transitioning bad data by giving teams the tools necessary to maintain SQL queries, run those queries in bulk, follow the results in real-time, collaborate, and report on results. The reporting capabilities in this product enable users to export and share the metrics provided to their teams and to project stakeholders.

QuerySurge supports Teradata database technologies. RTTS is a member of the Teradata PartnerIntelligence Network.
